Creator performance

LAST 7D VS PRIOR 7D

CREATOR	LAST 7D	PRIOR 7D	CHANGE	SHARE	NEW SUBS
Emma Storm VIP	\$12,708.88	\$27,296.15	-53%	39.6%	93
Yasmine	\$9,353.22	\$6,953.48	+35%	29.2%	103
Fox Heart	\$3,861.26	\$2,732.01	+41%	12.0%	23
Ella Robinson	\$2,848.55	\$5,316.50	-46%	8.9%	63
Vega Fox	\$1,972.40	\$1,715.62	+15%	6.1%	26
Miya Rai	\$679.01	\$744.28	-9%	2.1%	17
Kao Chan	\$516.74	\$364.72	+42%	1.6%	6
Alice Baby	\$140.77	\$222.85	-37%	0.4%	16
Anne Love	\$0.00	\$5.59	-100%	0.0%	0

Contribution to the change in new subs

RANKED BY IMPACT

CREATOR	PRIOR 7D	LAST 7D	CHANGE	SHARE OF MOVE	CUMULATIVE
Emma Storm VIP	225	93	-132	67%	67%
Vega Fox	68	26	-42	21%	89%

Where the change came from. New subscribers moved -196 overall. **Emma Storm VIP** alone accounts for 67% of that move, and the 2 accounts below are 89% of it. Treat this as an account-level question, not an agency-wide one.

Unlock price trend

Average price of a single PPV unlock, over rolling windows ending 1 Sep. Net of the OnlyFans 20%; the price the fan pays is 1.25 times these figures.

Rolling windows

WINDOW	UNLOCKS	PPV NET	AVERAGE UNLOCK	LAST 30D VS THIS
Last 30 days	2,862	\$129,621.39	\$45.29	—
Prior 30 days	4,379	\$150,330.19	\$34.33	+31.9%
Rolling 60 days	7,241	\$279,951.58	\$38.66	+17.1%
Rolling 90 days	10,594	\$399,584.08	\$37.72	+20.1%

Price rose 31.9% and volume fell 34.6%. The average unlock went \$34.33 to \$45.29 against the prior 30 days, and sits +20.1% above the 90-day baseline of \$37.72. Over the same period unlocks fell from 4,379 to 2,862 and PPV revenue fell 13.8%, from \$150,330.19 to \$129,621.39. The higher price has not so far offset the lower volume.

Where the price sits

UNLOCKS BY PRICE BAND, NET

BAND	LAST 30D	SHARE	PPV NET	PRIOR 30D	SHARE	CHANGE
under \$20	1,209	42.2%	\$17,130.14	2,152	49.1%	-44%
\$20 – 40	769	26.9%	\$22,397.97	1,274	29.1%	-40%
\$40 – 60	275	9.6%	\$13,198.16	315	7.2%	-13%
\$60 – 100	207	7.2%	\$15,686.80	268	6.1%	-23%
\$100 – 160	129	4.5%	\$17,528.32	243	5.5%	-47%
\$160+	273	9.5%	\$43,680.00	127	2.9%	+115%

The top band is doing the work. Unlocks at \$160 and above went from 127 to 273. They are 9.5% of all unlocks and 33.7% of PPV revenue. Every other band fell in both count and share of revenue.

Comparison caveat. Creators who left during August lost their transaction history in Infloww. The prior-30 and 90-day windows therefore exclude them entirely, so this compares against a roster that no longer fully exists.

Progress

Written sections — entered by the team, not generated. They describe the calendar week beginning **24 Aug**.

What actually got done — and the results

- Built per-chatter performance measurement for the first time. We can now see PPVs sent, unlock rate, fans chatted, message volume and response time for every chatter, per creator, per day. This was our stated blocker last week and it is now closed.
- Used it immediately to locate the largest single movement in the business: one chatter's output on our top creator fell \$6,115 week on week, driven by fewer and lower-priced offers rather than absence. Message volume and fans contacted both rose over the same period.
- Second-tier creators grew again. Fox Heart +90% and Ella Robinson +35% week on week, together adding \$3,543.
- Automated the reporting itself. Daily, per-shift and this weekly check-in now generate and publish without manual work.

What did not get done — and the effect

- Acquisition still not addressed. New subscribers fell 38% week on week, from 582 to 361, while renewals fell 6% and the average unlock stayed flat at \$50.33. Revenue held up because monetisation absorbed it. We still cannot diagnose the cause because traffic source and promotional spend are not recorded anywhere.
- No standard for how PPV offers are made. We can now measure that unlock rates range from 16% to 73% across the team, but there is no documented approach for anyone to be measured against or trained toward.
- Creator history exports still not routine. When a creator leaves, their entire earnings history disappears from Infloww. One departure in late August was not exported in time and is permanently gone.

#1 focus for the upcoming week

Turn the new chatter data into a standard, starting with the accounts where the money actually moves.

Why: Until this week we suspected chatter consistency was our largest controllable variable but could not prove it. We can now: unlock rates run from 16% to 73%, and a single chatter's change on a single creator accounted for roughly twice the entire agency's week-on-week decline. Unlike acquisition, this is measurable today and needs no new instrumentation.

What it brings: The team sent 822 PPVs and unlocked 464 in the current week, a 56% blended rate. Moving the bottom half of the team toward the top half's conversion is worth more than any pricing change, and we can now measure whether it is working week by week.

Problems & input needed

Written sections — entered by the team, not generated.

Biggest blocker

BLOCKER

We still have a revenue dashboard, not a business dashboard. The chatting side is now instrumented, but we have no promotional spend, no traffic source, no cost per acquisition, no chatter payroll and no agency split in the same view. We can answer 'did we move volume' and now 'who moved it', but still not 'did we make money' or 'where should the next dollar go'.

IF WE HAD A MAGIC WAND

Instrument acquisition end to end — know where every new subscriber came from and what it cost. New subscribers fell 38% this week and it remains the single largest movement we cannot explain.

Where we are stuck or unsure

- Acquisition cause. New subs fell 38% in one week with no matching drop in conversion or pricing. We cannot tell whether it is a promo ending, an algorithm change, posting cadence, seasonality, or the roster changes from creators leaving. Nothing in our data distinguishes them.
- Whether the chatter spread is skill, assignment, or fan mix. We can now measure that unlock rates vary 4.5x across the team, but not why. A chatter working a creator with a strong whale base will look better than one working a colder audience, and we cannot yet separate the operator from the account.
- Concentration risk on our top creator. She is 45% of net revenue and accounted for more than the entire agency decline this week. We do not have a plan that reduces this dependency rather than just monitoring it.

Input needed, continued

What would help most from the consultant's side.

Video ideas that would help us

IDEA 1

Instrumenting acquisition when you only have platform data. How do agencies attribute new subscribers to a source without ad-platform integration? This remains our number one blocker.

IDEA 2

Turning chatter statistics into a management system. We now have per-chatter conversion data. What are the two or three metrics worth managing on, what are healthy benchmarks, and how do you coach against them without gaming the numbers?

Questions for the consultant

ANALYTICS

What is the standard approach to subscriber-source attribution on OnlyFans when the platform does not expose referrer data? We are flying blind on acquisition.

CHATTING

We can now see unlock rates ranging from 16% to 73% across our team. What is a realistic benchmark, and how much of that spread should we expect to be the creator's audience rather than the chatter's skill?

SALES

We have documented a stepped-pricing sequence that produced over \$2,200 from a single fan in under 90 minutes, and we can reproduce the pattern in the transaction data. Is this a known play, and are there refinements or guardrails we are missing?
